Wedding Bells

SPRINGBETT-McIVOR

On Tuesday afternoon July 3, at 2:30 p.m. a pretty wedding was solemnized at the home of the bride's parents, where Margie Isabelle, daughter of Mr. and Mrs. A. R. McIvor, was united in marriage with Edward Victor Springbett, prominent of Delia High School.

The bride, charmingly gowned in a period gown of white georgette and silver lace, carried a beautiful bouquet of dark red roses and lily of the valley. She was given in marriage by her father, the Rev. J. Rex Brown officiating.

After the ceremony a delectable buffet luncheon was served from a prettily appointed table covered by a three-fold wedding table, surrounded by tall yellow tapers in low silver sconces. Yellow tapers and pink and mauve sweet peas completed the decorations.

The bride and groom left on the afternoon train for Edmonton, where they will remain for the remainder of the month, and were greeted at the station by a large number of friends. The bride travelled in a smart rose-colored sport dress with hat and bag to match, blonde shoes and gloves completed her travelling ensemble.

The guests were: Mr. and Mrs. V. Springbett and Douglas Springbett (Red Deer); Mrs. D. B. McIvor and daughter Margaret (Stettin); Miss Elsie Blomster, Mrs. C. G. Blomster, and Mrs. A. R. McIvor, Miss Jean and Jessie McIvor and Red McIvor; Miss Elsie Sheppard played the wedding march and Douglas Springbett entertained at the piano during the luncheon.

DIPHTHERIA

Diphtheria is an acute communicable disease caused by certain bacilli, which live best in the throat of the child. These bacilli form a powerful poison, which destroy the lining of the body. The poison most readily attacks the throat, the heart and the kidneys, as well as the throat. The effect of this poison or toxin may be temporary or permanent. Eight per cent. of all diphtheria is fatal in nine to nine per cent. of cases where antibiotic is used in advance during the first twenty-four hours of the acute disease. Children who are given whooping cough vaccine are less likely to contract diphtheria. This vaccine will protect them from contracting diphtheria for a period of three to five years. Towns in Canada, however, will permit the vaccination of children. Eight per cent. of all diphtheria is fatal in nine to nine per cent. of cases where antibiotic is used in advance during the first twenty-four hours of the acute disease. Children who are given whooping cough vaccine are less likely to contract diphtheria. This vaccine will protect them from contracting diphtheria for a period of three to five years.

The School Trust has been directed to determine definitely whether a child is susceptible to diphtheria, and would contract it if exposed or whether he is immune. Nearly all children under school age are susceptible after they are over six months of age. All children over the age of six months and who have not been given one or more doses of vaccine should be given the Schick Test. This will tell which of the children and the second series. Towns in Canada, however, will permit the vaccination of children. Eight per cent. of all diphtheria is fatal in nine to nine per cent. of cases where antibiotic is used in advance during the first twenty-four hours of the acute disease. Children who are given whooping cough vaccine are less likely to contract diphtheria. This vaccine will protect them from contracting diphtheria for a period of three to five years.

29.30% LOCAL BOARD OF HEALTH

Alberta Wheat Pool

The cut-off date for the delivery of wheat from the 1927 crop to the Alberta Wheat Pool is Monday, July 16th. That will be the last day that wheat will be received for the 1927 crop. Wheat delivered out on that day, and wheat which delivered on that day at country elevators, will be included in the 1927 pool. All wheat received after that date goes into the 1928 pool.

The Board of Directors of the Alberta Wheat Pool have decided to allow 6% interest on the Commercial Reserve accumulated by the organization. This interest will be paid from August 31, 1927, and the payment will be made as soon as possible.

Lord Rodger, who farms a thousand acres of land in the Edmonton District, has signed a Wheat Pool Contract. The Duke of Bedford's 7,000 acre farm at Brooks has also been placed under a Second Series Contract.

Plan to see the speaking comedy play, entitled "The Bubble," at the Chautauque tent Saturday night.

An evening in Havell on the last of Chautauque, with scenic lighting effects and delightful music bring to a close a happy Chautauque week.

Health Service of the Canadian Medical Association

LIFE EXTENSION

During the past fifty years, fifteen years have been added to the life expectancy of each new-born infant. This has come about chiefly because of the scientific knowledge concerning the prevention and treatment of acute diseases have been used.

The acute communicable diseases, such as measles, diphtheria, typhoid fever and scarlet fever, are diseases of early life. It is generally known that they are communicable and dangerous. It is agreed that they should be placed under the control of health authorities, and that they are a state responsibility. Other acute infectious diseases, such as the summer diarrhoea of infants, are being successfully combated.

As a result of modern health work, many more people live to reach fifty years of age, but those arriving at the age of fifty have not very great expectancy of life than had those of the same age during the past few decades.

In later life, the individual is the victim, not so much of acute disease but of what are called the chronic degenerative diseases. These latter are the result of the wear and tear of the body.

In later life also there are infections. These infections are not as acute as in early life, but they are chronic. They are dangerous because they are insidious in their origin, hidden sources difficult to recognize. They do not destroy life by reason of the damage they do at the point where they exist, but by the damage done to parts distant from the point, through the poison they pour into the blood stream.

Accumulated and infected toxins are such dangerous foci of infection. Carried for years, without little or no discomfort, they are continually poisoning the blood stream and, sooner or later, they cause damage to the heart, blood vessels, kidneys or other organs.

If human life after fifty is to be prolonged, such foci of infection must be discovered and removed. The Periodic Health Examination offers the most practical means for doing this.

Questions concerning Health, addressed to the Canadian Medical Association, 154 College Street, Toronto, will be answered by mail. Questions as to diagnosis and treatment will not be answered.

Two Albertans at Canadian Olympic Team

Two Alberta athletes have been named on the track and field team which will represent Canada at the 1928 Olympic games being held this month at Amsterdam, Holland. Darryl Filling of Calgary will compete for Canada in the javelin throw and Stan Glover of Edmonton has been chosen as a substitute on the relay team. Alberta is well represented in the performance of the Commercial Grade Ladies' basketball team of Edmonton, international champions, who will take part in a number of important games at the Olympics, and in other events on the Continent.

"Waterhole" Renamed "Fairview"

The town of Waterhole in the Peace River country, it is announced, will be known in the future as Fairview and will occupy a site some five miles from its present location. The townsite of Fairview, which has just been laid out, is at the end of steel on the extension of the Central Canadian Railway being constructed the main northwest of Waterhole. The new name is said to be a happy choice as the town in its new location will command a view over a wide stretch of country across the Peace towards Spirit River.

Premier Attending California Congress

Wm. J. E. Brownlee left during the week for Berkeley, California, where he is to deliver an address at the American Institute of Cooperation. A member of the American speakers who constituted the program of the recent successful Alberta Institute of Cooperation will also address the similar gathering in California.

Canada has been sending her foreign capital and today only 27 per cent. remains.

More life insurance is carried by Americans than the rest of the world. Americans need more,

NOTICE

Whereas, climatic and other conditions over which the farmer had no control, have prevented a number of pool members from delivering their wheat prior to the date set for cutoff, July 16th, 1928, the Board of Directors by resolutions passed this 17th day of July, 1928, have authorized that any street wheat delivered at, or on or before July 31st, 1928, be settled for on a basis of the 1927-28 pool price. Members delivering wheat between the dates July 16th and August 1st will receive the initial payment on the 1928-29 initial payment schedule, but an adjustment will be made by the Pool Headoffice which will bring the payment up to the 1927-28 Pool average price Alberta Wheat Pool.

Not Dangerous Occupation

New Devices Have Made Flying Safer

With the march of science, new magazines are bound to make their appearance, and it is significant that a new publication, "Canadian Aviation," is now issued monthly in Canada. As it is sponsored by the Aviation League of Canada, which is doing much to establish flying clubs throughout the Dominion, it can be regarded as an authentic source of news which will be eagerly read by a large proportion of young Canada, and as an agency in the development of flying in this country it is welcome.

Aviation is still a young science, and most people remember the first

But as the June issue of "Canada," a national magazine,

During 1927, British air transport "gees" machines travelled 873,000 miles, and carried a total of 20,344 passengers, and for the third successive year had no accidents involving death or injury to any passenger. During 1926 Deutsche Luft Hansa Company machines ran 3,816,150 miles and transported 54,203 passengers without a single fatality.

These facts speak for themselves. But let's speak not be so backward about letting their boys take up aviation as a profession. There are now safety devices which, Sir Alan Cobham says, have made flying safer than motoring, and truly a perusal of the newspapers every week bears out that claim.

Englishman Has Trained His Mind
To Remember Dates

"On what day did July the First
fall—Anno Domini One? This was
a rather strange question I put to
Mr. James F. Gillies," writes a Daily
Herald Mitcham correspondent.

"Without the slightest hesitation,
he replied, 'On a Friday.'"

"And on what day will December

"Such is the power of Mr. Gillies, who claims that, through sheer memorizing and nothing else, he can give the day of any date between A.D. 1 and A.D. 4099—a million and a half

endar, and students who delve into the relation between the celestial bodies and the world's time, can easily check the accuracy of Mr. Gillespie's memory. Mr. Gillespie, who was born in Highbury, North London, 36 years ago, and is a clerk employed by the same firm, says that he adopted his curious hobby of memorizing dates when he was about 20."

New Device For Camera
Records Of Flower's Growth Taken
Through a Microscope
 A device for automatically filming the growth of various organisms has been perfected by Carl D. Clarke, medical illustrator of the Johns Hop-

Mr. Clarke has taken pictures through a microscope of a flower's growth, the beating of a turtle's heart and the movement of organisms in Roquefort cheese and in vinegar, without continuous running of the camera and consequent waste of film and power.

Mr. Clarke has devised an eighty electric clock which can be set any desired interval from seconds half hours. The clock controls an

There's a Difference

house shooting. But when Mr. Coolidge takes a holiday the world is of the size of his shirts, the length of his fishing rod, the number of loaves of toast he eats at breakfast, the hymns he sang loudest in church, and a thousand and one details of his life.

Each month the moon is said to be in perigee when nearest to the earth and in apogee when farthest from the earth.

"Your eggs are very small. You must take them away from the hen soon!"—Kasner, Stockholm.

they are now. As they looked out on their quiet streets, in which their family horses roared along leisurely toward their goals, what would they have said if they could have seen this motorized age, with people dashing through the streets at various speeds?

The last quarter of the nineteenth century developed wonderful inventions. But it seems doubtful if it could be compared with the marvels of the first quarter of our century with its automobiles, its radios, and its aeroplanes.

The effect of automobiles has been one of the most far-reaching changes in the history of society. It has pulled people out of their stationary habits, and given them a free range of movement. It enables people to leave homes in the country and work in cities and towns. It has saved country travellers time and money.

IT'S BETTER BECAUSE IT'S CANADIAN

Dr. White is giving a special talk to young people next Sunday at the Baptist Church. All children and young people are invited to come at 12 o'clock.

Fire destroys the green standing timber, leaving dead trees to dry out and kindling for the second and third fires which generally follow. These young growth doesn't get a chance. Human carelessness accounts for most fire in the woods. Only carelessness will save Canada's remaining forests.

On Wednesday last the Baptist School held their annual picnic at the house of Mr. and Mrs. Harms. The day, in answer to prayer was just perfect, and the attendance was very large. The children had a great time and got lots of amusement out of the slide, tennis driving and sack races. The ladies showed great spirit in the egg and spoon and egg pushing races. We wish to thank all who helped to make the children happy.

Mr. and Mrs. R. R. Tillotson and four daughters left Sunday, en route to Spokane and Vancouver, where they will spend the next three weeks.
